1- Description

Almost all websites need a big and nice carousel to display their beautiful photos and attract the user's attention. Are you trying to find this kind of solution for your Joomla website?

There is no need to look further. Our IceCarousel Joomla module will immediately grab your big photos from your Joomla articles and will turn them to a nice-looking carousel. When we built this module we had a precise goal. It should be easy to be configured and fast-loading.

Of course, taking advantage of the marvelous Bootstrap framework you can be sure that this module will work more than fine and **most importantly you have a responsive carousel on your Joomla website.** The IceCarousel will adapt to all screen resolutions and your visitors which are browsing your website from a Smartphone will thank you for making their life easy.

Also, worth to be said is that you don't need to crop your images so that all of them have the same size. IceCarousel will do this task for you. Just enter the parameters for your desired width and height and your beautiful photos will be cropped automatically.

2- Installation and Configuration

System Requirements

- IceCarousel requires only that you have already installed **Joomla 3.0** version and have administrator access to it.
- We assume that you have met the all other requirements like the PHP version or the Database version for Joomla 3.

Installation

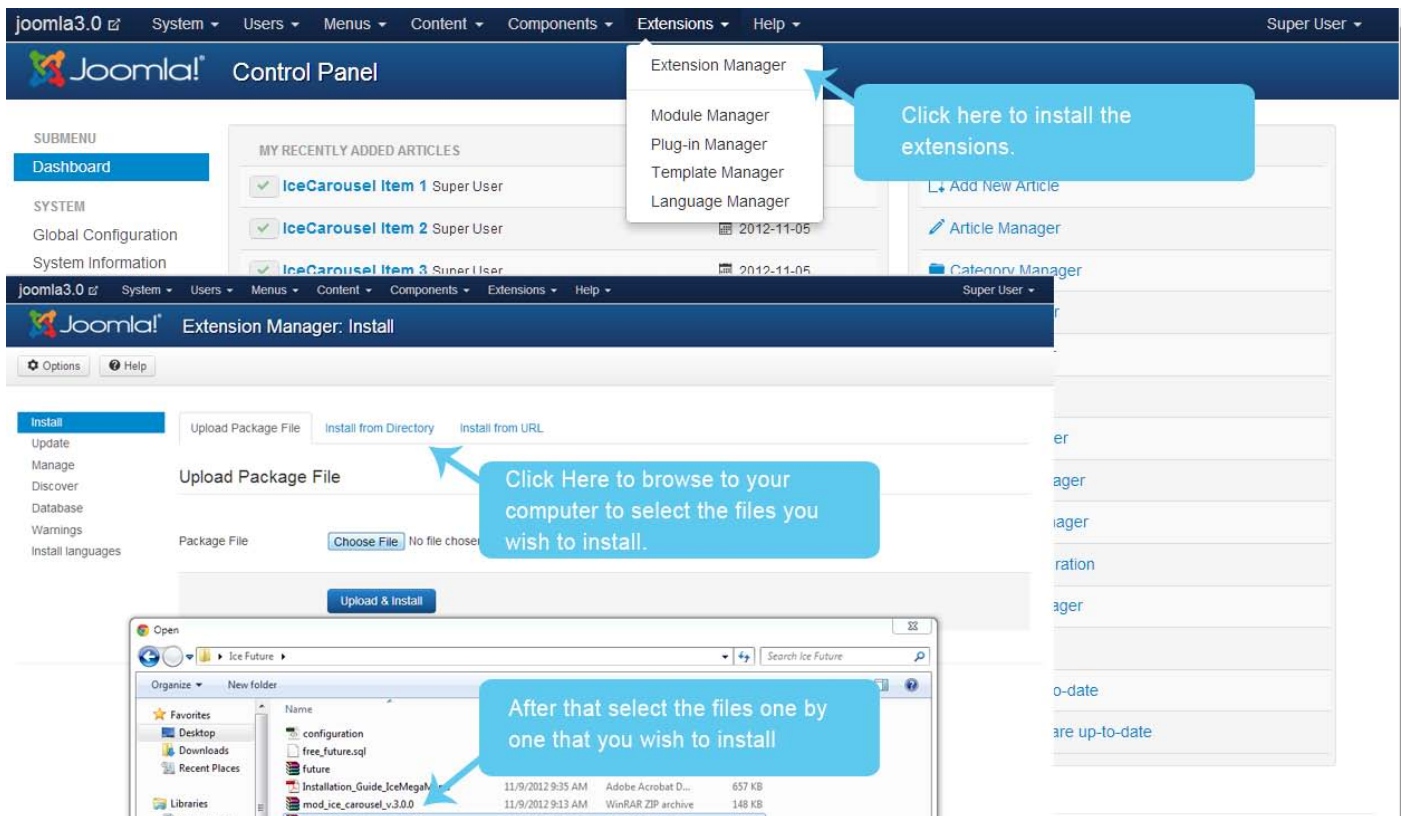

- Login to your Joomla Administrator (<http://www.your-site-name.com/administrator>)

The image shows the Joomla! administrator login interface. It features the Joomla! logo at the top left. Below the logo are three input fields: 'User Name' with a user icon, 'Password' with a lock icon, and a language dropdown menu currently set to 'Language - Default'. Each input field has a help icon (question mark) to its right. At the bottom of the form is a blue 'Log in' button with a white lock icon.

Enter the username and password and click here to login in.

Install Files

- Go to the "Extension Manager" page and under the "Upload Package File" form select icecarousel 3.0.zip

* If you receive an error in a red box saying "Warning: Failed to move file!" probably you have not enabled the "FTP Settings" which is on the following:

Joomla Administrator -> Site (main menu) -> Global Configuration -> Server (3rd tab)

* If case you still cannot install the items please [Ask for Help](#).

Enable the Module

Go to The "Module Manager" page and to quickly show the module, filter it through the "Filter" form by typing "icecarousel". Then you should enable the IceCarousel module by clicking on the red cross sign as you can see from the screenshot below.

Module Manager: Modules

Filter: ice

IceCarosuel Module

IceCarosuel Module can display a set of articles in a small area on your website in an accordion style. It is licensed under the GNU GPL license.

Site / IceCarosuel Module

- Basically each parameter is explained on the module page. If you put the mouse over the parameter title you should see a small black pop up box to appear. So, there is no need to explain each of these parameters here on this guide.
- However you should keep in mind some things. The first one is to choose the pages/the menus where IceCarousel will appear. Do this in the last tab, Menu Assignment. There isn't any definite selection of menus – all depends on your choice.
- Also you may select the color scheme for IceCarousel the default (white) or dark.

Afterwards the next important step is to select what you want to the module to display. This is handled by the last parameters in the Basic Options tab, Data Source.

The screenshot shows the Joomla! 3.0 Module Manager interface for the 'mod_ice_carousel' module. The 'Basic Options' tab is selected. The parameters are as follows:

Parameter	Value
Select Theme	- Use Default -
Render Thumbnails	YES
Image quantity	75
Module width	940
Module height	560
Image Width	1200
Image Height	540
Data Source	Content

A blue callout box with an arrow points to the 'Data Source' dropdown menu, containing the text: "Select the content you want to display."

The next step is to select the category from where the articles will be taken. The way you should work with it is pretty simple: Group the articles (text or images) in a new category (e.g in the category "IceCarousel" and then choose this category in Filtering Options, Source From..

Source from Category

Articles ID

Category - IceCarouse x

Show Article Title Yes No

Linked Titles Yes

Header Level h4

Show last separator Yes No

Order Results Ordering - Ascending

After selecting the source you can filter the category you want.

The other things to set about the module are” the maximal number of items to show (Limits items), the effect (interval or vertical), the autoplay option etc.
